This paper draws for the Bua data from sessions, communications and publications of the **Bua languages group** an informal group which started in January 2017. Members are (were):

Pascal Boyeldieu & Florian Lionnet & Ulrich Kleinewillinghöfer & until 2019: **Raimund Kastenholz**

Apart from individual publications, there are collective papers and communications:

BKKL 2018: The Bua group languages (Chad, Adamawa 13): A comparative perspective.

BKKL 2020: The Bua Group noun class system: Looking for a historical interpretation. (online)

BKL 2023: The Bua Languages (Chad): Description, Comparison, Reconstruction. Linguistics Colloquium, Princeton University.

*several slides of this presentation, marked in the reference line as **FL**, are fully or partly copied from **Florian Lionnet. 2024. "Noun Classes" in Bua Languages: History of a Gradual Decay.** Linguistisches Kolloquium, Humboldt Univ. zu Berlin.*

Unless stated otherwise all other data I collected myself in situ during field research in various research projects of the Universities of Frankfurt, Bayreuth, Mainz, 1990 - 2018.

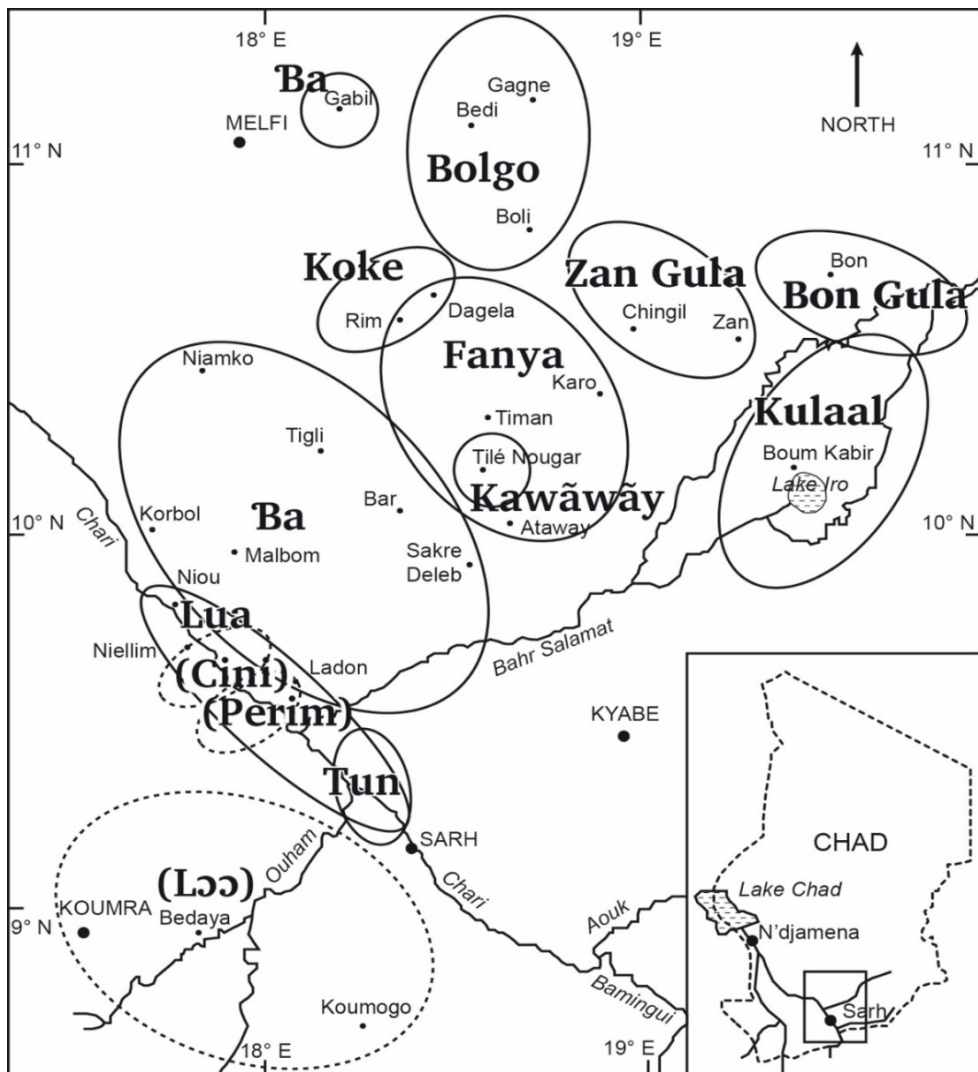

Terms used in this paper

“Noun class” and “gender”

AGR = “agreement class”

the set of nouns which trigger the same agreement patterns
their sg/pl pairings define a **“gender”**

- **NF = “nominal form class”, or “noun form class”,**
morphological classes of nouns which bear the same affix(es)
- **noun class = agreement class + nominal form class**

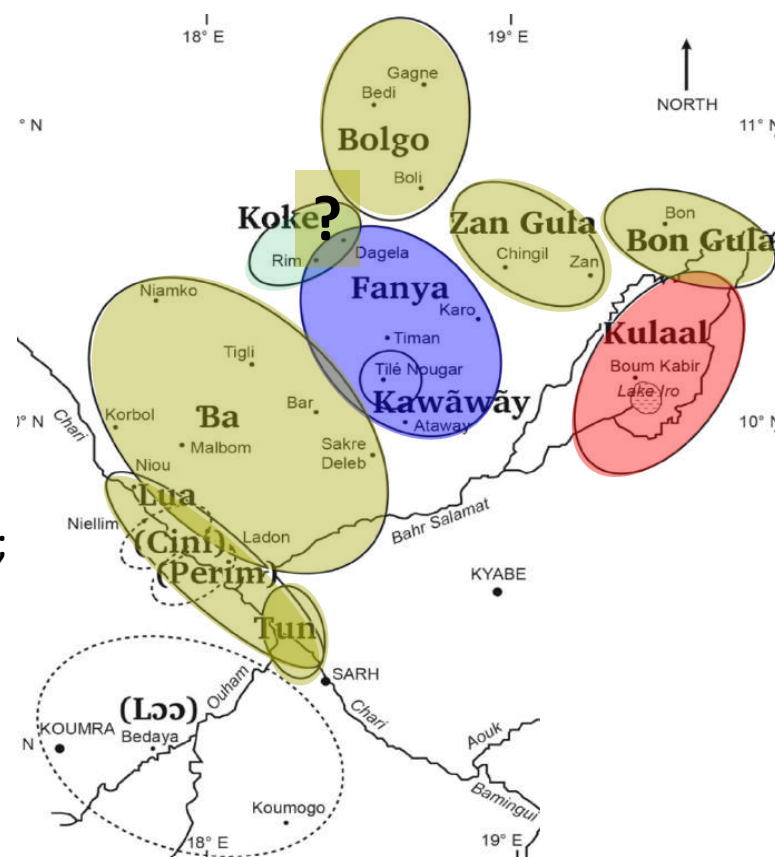

Map 1. Distribution of the Bua languages in Southern Chad

Introduction

In 2018, 2020 and 2023 we demonstrated that the Bua languages, spoken in Southern Chad, show morphological traces of a nominal classification system. Yet only one, **Kulaal**, preserved a functioning class system where particularly the determiners display patterns of grammatical agreement (AGR), while most nouns bear nominal affixes (NF)

Lionnet 2024 revealed that **Fanya** varieties preserved a set of connectives, relating to most of the alleged Proto-Bua AGR classes. However, in Fanya their use in associative constructions is mostly optional: one singular and one plural form have become the default; others are only optionally (and rarely) used.

Other Bua languages merely display alternating internal and/or final segments that chiefly express a contrast of number.

Kulaal : Marqueur de pluriel -(n)te/i/ɿ

genre	sg.	pl.		CS *Bua
*-m₁mɛ / *-(n)te_{ki}	hām (-mè)	hótì (-kì)	alcool, bière	035

Thus, the reconstruction of the Proto-Bua nominal classification (BKL 2023) is, as regards AGR classes largely, but not entirely, based on the evidence in Kulaal.

The overview shows the principal nominal suffixes = NF, as they are linked to the various AGR classes.

SINGULAR		PLURAL		AGR classes are cited in the form of the determiners in Kulaal. Highlighted in green are singular/ plural pairings relevant to this paper
NF	AGR	NF	AGR	
*-A	*kɛ	*-i [+ATR]	*ji Kul:	The classes below the dotted line are vestigial
*-U	*kʊ		*ɲi	
*-l	*lɛ	*-n	*tʊ	
*-m ₁	*mɛ	*-(N)tɛ		
<hr style="border-top: 1px dashed black;"/>				
		*-b/ɓ/w(V)	*ɓɛ	(vestigial) <i>human, kinship terms</i>

?	(*kí ?)	*-m ₃	(*mo ?)	(Vestigial) <i>‘thing’, ‘place’</i>

Nominal form classes in Kulaal

The preceding slide shows that the general nominal suffix of AGR class **ki** (< proto *ji) is **-i** [+atr] (< proto *-i).

However, among the almost 600 nouns in the largest AGR class **ki**, there are less than 20 nouns with nominal suffixes, which do **not formally match** with the main class morphemes: AGR **ki** nor the plural suffix ***-i**.

Most remarkable are the nouns with the **NFs -ti ~ -te, -ntɪ and -nte**, which only occur with small, but distinct sets of nouns, respectively.

We can distinguish the following manifestations.

(i) **-tì ~ -tè, (-re), the exclusive plural NF in gender mɛ / ki**

- hám / hó**tí** beer
- fám / fõ**tì** milk
- ím / î-**tè** water
- héém / héén-**té** smoke
- nó**m** / nó-**tè** oil, fat
- lò**m** / lò-**tè** salt
- fò**m** / fò-**rè** flour

Gender mɛ / **ki** is attested with 7 singular/plural pairs, all denoting **liquids** or **masses**.

Their respective 'singulars' are in AGR class mɛ, representing the wide-spread proto noun class *ma. *ma is, however, mostly viewed as a single class (gender).

Such 'plurals' usually refer to different quantities, conglomerations, or varieties.

(ii) -t̥i ~ -te, the nominal suffix of liquids and 'dirt' in AGR class ki

- hě́-t̥è (kì) blood
- èè-t̥é (kì) tears
- hě́e-t̥è (kì) urine
- tìn-t̥è (kì) drink sp.
- lóó-t̥i (kì) dirt

- cf. Fanya: hí-mé 'blood'
 ʔĩ-t̥í 'tears'

The semantics of this set of nouns with NF -t̥i ~ -te resembles the preceding one, liquids, but also 'dirt'.

Yet there are no corresponding 'singulars' in class mɛ, nor any other class attested.

The cognate terms from Fanya have no singular/plural pairings either. 'blood' relates to 'singular' class mɛ, and 'tears' shows a nominal suffix -t̥í, matching Kulaal -te.

(iii) plural NFs **-ntɩ** and **-nte** in gender kɔ / ki

- The major gender kɔ / **ki** contains a small set of nouns, which form their plurals with the NF suffixes **-ntɩ** and **-nte**, 3 out of 5 of the examples denote **body parts**.

•

- tí-ú (kò) / tĩ-**ntí** (kì) 'hip'
- kí-ú / kí-**ntì** 'forehead'
- hěě / hě-**nté** 'tail'
- wĩ / wĩ-**ntì** 'sun, day'
- fĩ / fĩ-**ntè** 'song'

The nasal onset of the plural suffixes in this set, and why the final vowel of **-ntɩ** does not adjust to ATR vowel harmony remains unexplained.

- cf. Bolgo S: tìr / tì-**ri** 'forehead'; hĩ-l / hĩ-**dĩ** 'song'
- uncertain is: tóó-lì (?) / tóó**ntì** 'groin' (= 'aine, creux de l'aine') **?** a locative derivation with **-tɩ** ?
cf. fáál / fáán 'œuf'; fáán**tɩ** 'oeufs (de poule), réunis au même endroit'

(iv) nominal suffix **-te**, a single case in gender **le / ki**

- 4 of the 7 nouns in the **minor** gender **le / ki** denote **body parts**. Yet only 1 noun marks the plural with the NF variant **-te** of class **ki**, while the others build plurals with the 'regular' suffix **-i** [+atr].

The cognate items from Fanya and Bolgo are cited to show that gender **le / ki** appears to be a morphologically marked semantic subset, containing **body parts** and terms from the basic vocabulary.

- | | | Fanya | Bolgo S |
|-------------|--------------------|--------------------------|------------------------|
| • way, road | ù-l / ù- tè | ʔùlù / ʔùl- kè | ʔù-l / ʔù- dī |
| • breast | máá-l / móó | máá-lé / máá- y | mèè-l / mèè- dī |
| • leg, foot | ná-l / nó | ná-lè / náà- y | ná-n / né- gí |
| • tooth | nèè-l / nèè | (níy-à / níy- è) | nī-l / nī- gí |
- the other nouns in Kulaal are 'vagina', a plant sp., and a fish sp.; the latter two are uncertain.

plural NF **-ki** AGR **ki**

- 4 nouns in the Kulaal data form the plural with the nominal suffix **-ki**.

On a first glance this is not surprising, since **-ki** matches formally with AGR **ki**.

- | | | <u>Fanya</u> | <u>Bolgo S</u> |
|--------------------------------|-------------|----------------------|----------------------|
| yàà (kè) / yòò- kì (kì) | water-hole | | |
| pèè (kò) / pèè- kĩ (kì) | (fence) mat | | |
| èò (kò) / èη- kĩ (kì) | compound | ʔèw / ʔèè-kì; ʔèè-ří | |
| tòη (kò) / tòη- ki (kì) | house | tóò/ tô-y- kè | tòò / tòò- gĩ |

- Yet, the cognates in the related languages and the fact that Kulaal AGR **ki** relates to Proto Bua ***ji**, may indicate that the NF **-ki** may share a similar status as the other NF under discussion.

-ki

- yàà (-kè) / yòò-kì (-kì) water-hole
- pèè (-kù) / pèèkì (-kì) mat (for fences)
- èù (-kù) / èη-kĩ (-kì) compound ʔèw / ʔèè-kì; ʔèè-ĩ
- tòn (-kù / tòn-kì) house tóò/ tô-y-kè tòò / tòò-gì

- mouth mù / mù-y-kè mùù / mùù-gĩ
- ear tú / túy, túy-kétò / tò-gĩ
- arm tɛ̃w / tɛ̃-y-kè tɛ̃ / tɛ̃-gĩ 'main'
- nose hò / hò-y-kè hò / hò-gĩ

Summary of the Kulaal evidence

- the major plural AGR class **ki**, forming plurals in several genders with almost 600 singular / plural pairs contains:
- 12 nouns with the **NF -ṭi ~ -ṭe**, which denote exclusively **liquids** and **masses**
7 of them are the 'plurals' in 'gender' me / **ki**,
while 5 occur without a 'singular'
- 5 nouns with the **NFs -nṭi** and **-nṭe**, which mainly denote **body parts** in gender ku / **ki**
- while the plural of 'road' is the only noun with plural **NF -ṭe**
in the minor gender le / **ki** (which also contains several body parts).
- *From an internal Bua perspective, it is tempting to relate the morphemes to one single archi-morpheme, and search for explanation of their distinct formal differences.
However, the comparative data also allow the supposition of distinct NF morphemes.*

In quest of probable cognates beyond Bua

- The existence of either morphological sets of nouns which do not trigger an own agreement pattern, or else NFs formally unrelated to the respective AGR morphemes are in language where noun class and agreement systems are on the verge of extinction neither very remarkable nor surprising.
- What is remarkable is, however, that the mismatching NFs in AGR class **ki** of Kulaal, which predominantly occur on terms from the basic vocabulary, are apparently linked with distinct semantics, and/or function ('pluralising' liquids and masses).
- And which furthermore, seem to be cognates to NF morphemes occurring elsewhere in noun class languages across 'Benue-Volta', with similar characteristics, and equally unrelated to the respective morphemes of the plural noun class which harbours them. Thus, these Nfs may be part of the common morphological heritage.
- The evaluation of this hypothesis is the topic of the remainder of this paper.

'plural class 4a'

- Since, the respective plural noun class where these specific NFs generally occur, seems to be in most cases cognate to the widespread plural class 4 *i, as reconstructed for example for Gur, I propose to introduce - for easier reference - the term '4a', denoting a formal subset of class 4 *i defined by the use of distinct formally unrelated NFs.
- This term would be in accordance with the commonly used term '2a', denoting a formal and semantic subset of proto class *ba, which contains kinship, and relational terms ('friend', 'chief'). The plurals in class *2a generally bear similarly mismatching affixes or NFs, while using the same AGR pattern as class 2.

In quest of probable cognates beyond Bua - 2

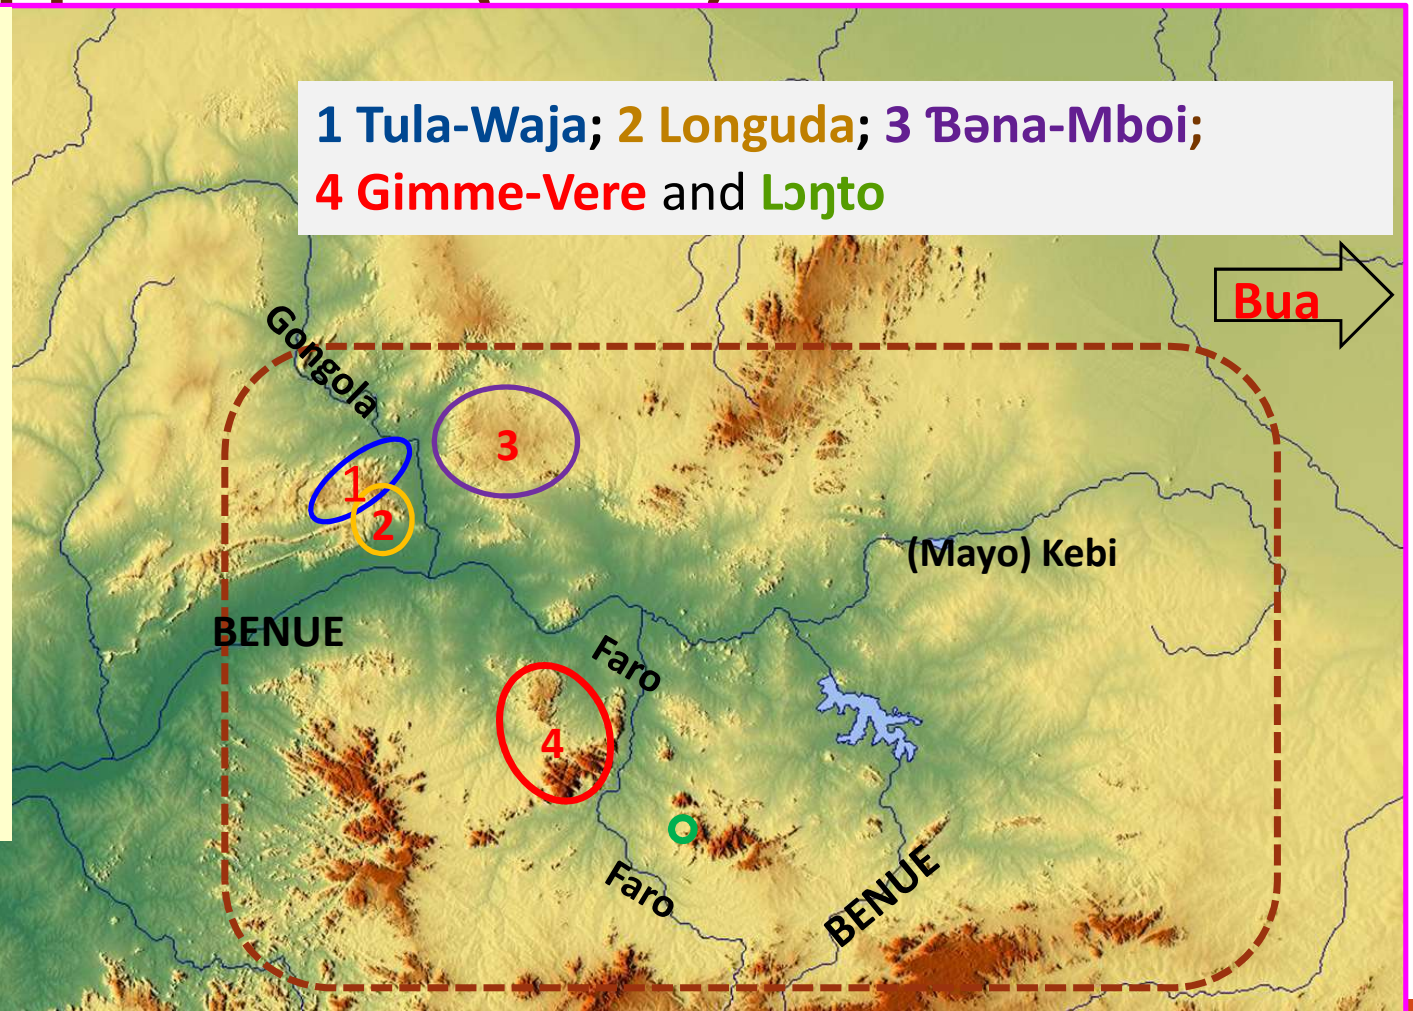

- A decisive characteristics of the NFs NF -**t**e/i, -**n**t**e** and -**n**t**ɪ** in Kulaal is their formal mismatch with the AGR morphemes of the respective noun class.
- Therefor only 'full-fledged' noun class languages with complex sets of AGR and NF morphemes are eligible for the evaluation.
- Apart from Kulaal, full-fledged noun class languages within the so-called "Adamawa" branch or "pool" (Güldemann 2018) are only found in 4 groups.
- All of them are situated at a considerable distance to the west in the mountains of the Upper Benue Basin. ...

Upper Benue (Basin)

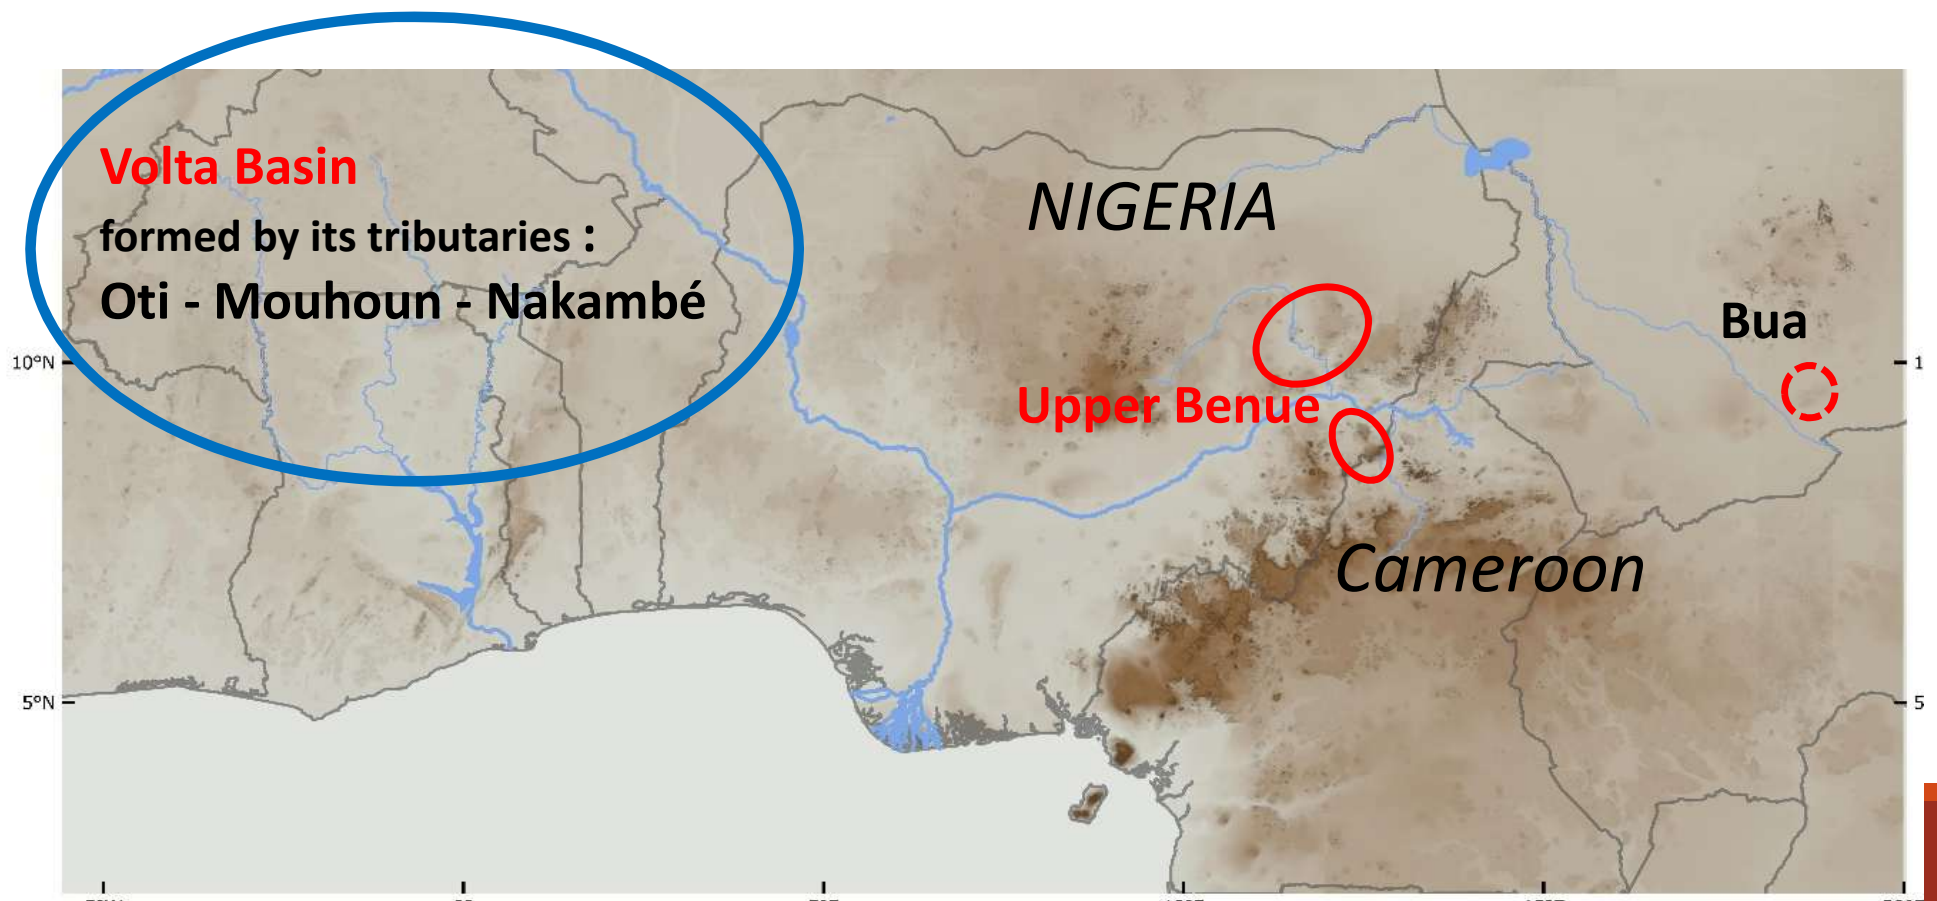

where they are concentrated north and south of the Upper Benue, where the Gongola and Faro River feed into the Benue.

In conjunction with noun class languages spoken in the upper part of the Volta Basin, they form the proposed "Benue-Volta" unit.

Thus ...

'Benue - Volta' is combining the class languages of the 'Upper Benue' with the class languages of the upper part of the 'Volta' basin

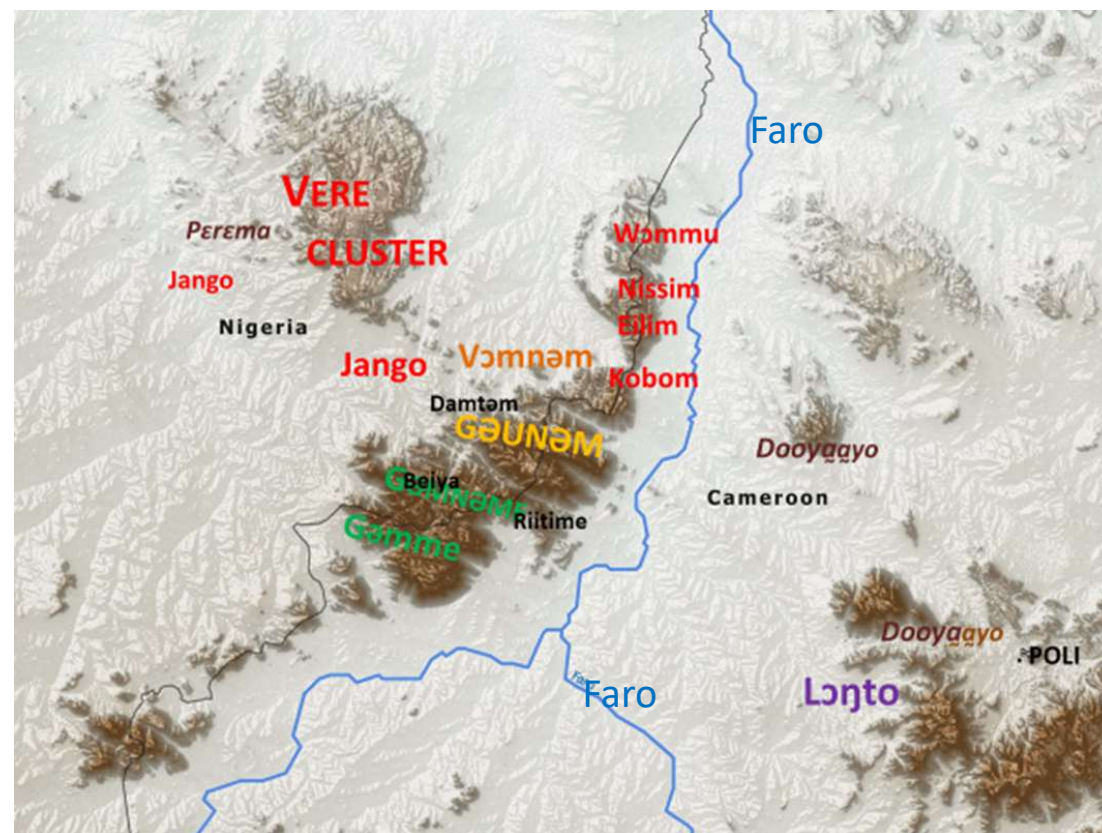

Benue-Volta or Upper Benue-Gur

- is defined by a bundle of morphological (and also lexical) features shared by noun class languages of the **Upper Benue Basin** and noun class languages of the upper part of the Volta Basin, commonly referred to as **Gur**. (U.Kw. 1996, 2024)
- Common heritage is - apart from basic and cultural vocabularies - a nominal classification system based on morphemes cognate in form, semantics and functions. Nouns are predominantly marked by nominal suffixes (= NF).
- The proposed term 'Upper Benue', avoids misconceptions about 'Adamawa' which does not appear to be a valid unit (cf. Bennett 1983, Güldemann 2018, U.Kw. 2020).

Gəmme - Vere

- We start the quest in the Gəmme - Vere languages, spoken in and around the Alantika Mountains. They and Lɔŋto, are the only 'full-fledged' noun class languages in the Samba-Duru group.
- As regards the NFs -tɛ/i, -nɛ and -nɛɛ in Kulaal, we also noticed the most significant similarities in this language group.

AGR classes of Samba-Duru

	AGR SG	TN	AGR PL	
1	°y-		°bΛ, °bo	2
1a	(-∅)		(-xx)	2a
25	°w-		°i ~ °ke	4
3	?		°-te, -ti	4a

12	°ke		°mo	22
13		°se		
23 = 6A		°mΛ		
20	°nΛ			

This extract of the overview outlines only aspects relevant for our quest. The lines connect the specific genders. Class 4 and subclass 4a use the same AGR class: *i in most of the Vere group, and *ke in Eilim and Nissim.

Subclass 4a is defined by an exclusive use of the NF suffixes °-te, -ti, and °-de, which do not match the principal NF suffixes of class 4, nor the respective AGR morpheme i ~ ke.

In Gender le/ i ~ ke a subset of nouns forms the plurals with the NF -te, -ti of sub-class 4a. They mainly denote body parts. Further items noted are 'name', 'grinding stone', 'stone' and 'mountain'.

plural subclass 4a : NF **-te, -ti** in Gender I / **i ~ ke**

12	°ke		°mo	22
13		°se		
23 = 6A		°mΛ		
20	°nΛ			

The NF *-de* of subclass **4a**, is the main suffix morpheme forming, where accepted, plurals of liquids and mass nouns of AGR class °mΛ. Examples of gender °mΛ / °i ~ °ke in Vere-Gämme languages are, however, rare.

More common is the use of *-de* as the principal pluralising suffix for collectives, and generic term of AGR class °se, in the gender °se / °i ~ °ke.

'Plurals' of transnumeral nouns with the NFs -de, -te
in gender °se / °i ~ °ke, and gender °mΛ / °i ~ °ke

Batəm	s / i	raa-s / raa [?] - te	broom				
		daŋ̀- s / daŋ̀- té	leaf				
Kobom	si / i	ráá-shì / ráá- dé	broom		mu / i	tam / tamìtì	ashes
Nissim	s / ke	góm-só / góm- dé	load		m / ke	tam / tám- dé	ashes
/Eilim		gu-sə / gu- de	stew, meat			júm / júm- dé	flour
Beiya	s / r	dúk-sə / dúk- tó	fish		m / r	zum / zum- tə	flour
		kú [?] -sə / kú- tór	bush; grass			niim / niim- tə	sleep
Gəmme					me / me	meme / mem- de	water
						zimε / zim- dε	flour

In Gəmme the plural AGR class *i is lost, the 'pluralised' nouns still use the NF -de, but take the same AGR as their 'singulars'.

Oti-Volta class *ci

- Comparable phenomena, i.e. the existence of a subset defined by the use of an unrelated NF in class *I and which in addition, is also linked to a peculiar semantic are also known in Gur, mainly from the Oti-Volta languages.
- There Mieke et al. postulated a 'provisional plural class' *ci :
- *"Under the label *ci we group together different noun class morphemes, mostly suffixes, found in North Central Gur and two isolated languages, i.e. the pronoun ci, the suffixes -ci, ʔə, -hi, -k, -ŋ, -x, -di, -de, -rɪ and possibly -fi, most of which look like suffix variants of class 4 [*i] because they all show the class 4 pronominal concord."* (Mieke et al 2012: 34f).
- The table on the next presents the languages where this class is attested and the respective AGR and NF morphemes. I slightly modified the table, in adding the terms AGR and NF and deleting 2 languages which do not have an AGR set, to adjust to this presentation.

Oti-Volta class *ci = 4a

		cl. *ci			cl. 4		
	language	(AGR) pron.	(NF) suff.	sg. to *ci	(AGR) pron.	(NF) suff.	sg. to cl. 4
OV-East	Byali	=4	-hĩ	*ɲʊ, *kʊ; *fʊ	ĩ	-i	*ɲʊ, *kʊ; *fʊ
	Ditammari	=4	-ri	*fʊ	ĩ	i-...-i	*ɲʊ, *kʊ; *fʊ; *da
	Nateni	ci	-ci	*ɲʊ, *kʊ; *fʊ	=*ci	=*ci	
OV Gurma	Ngbem(Gangam)	=4	-x, -N	*bʊ; *ma	ĩ	i-...-∅	1; *ɲʊ; *bʊ
	Dye (Gangam)	=4	-De	*bʊ	ĩ	i-...-~ ^H	1; *ɲʊ; *bʊ
	Gulmancema	=4	-di	*bʊ	ĩ	-i	1; *ɲʊ; *bʊ
	Konkomba SW	=4	-k, -g	*bʊ	ĩ	-∅	1; *ɲʊ
	Konkomba	=4	-i	*bʊ	ĩ	-∅	1; *ɲʊ
	Moba	—	-di	*ka	—	-i	*ɲʊ; *bʊ
	Ncam	=4	-fi	*bʊ; *ma	ĩ	- ^H , - ^M	1; *ɲʊ
OV-W	Farlfarl	=4	-Ri	*bʊ, *fʊ	ʔi	-i	*bʊ, *fʊ
	Viemo	ci	-co	1	—	—	—

The formal differences of the NFs of "class *ci" and the AGR morphemes are clearly noticeable.

But also, the striking formal similarity of the NFs of class *ci with the NFs of class 4a in Vere-Gämme and the NFs of ki in Kulaal.

The semantic of "class *ci" in Gurma languages

- "The establishment of a “new” plural class *ci ... is greatly supported by the evidence from Gurma languages, some of which attach the “irregular” class 4 suffixes only to the plurals to class 14 or use them as pluraliser for mass nouns...." [i.e. of class *ma]
- ... "Class *ci is only preserved in the form of noun suffixes."
- Winkelmann 2012 : 537
- Class 14 *bɔ generally contains the tree names plus a set of other nouns, like bow, spear, ...

class *ci in Dye forming plurals of mass nouns *ma and class * bu

mī-ṅú-m / í-ṅú- dé	water	bútṣbū / ítṣ- dé	bow

		bú-tūō-bū / í-tūō- ré	baobab

Robma: pl. NF : **-ti ~-te; -mse; -me**

AGR **Y(A)**

Robma has 4 singular and 4 plural AGR classes. The class markers are in the form of the demonstrative pronouns. Their uniform vowel **A** is probably the result of an homogenization. The respective NF or nominal suffixes are more numerous.

SG **Y.A** (< *ye-a?) represents class 1 [+human]. Our focus is on PL class **Y.A** (< *i-a?) which I assume to be cognate to **class 4 *i, (*yi)**.

The plural class **Y.A** has the three NF or nominal suffixes: **-te ~ -ti, -mse; and -me.**

SG		TN	PL	
AGR	NF		NF	AGR
YA	-é		-á	BA
WA	-ó~ -ú		-zà~ -sà	ZA
	-to			
RA	-ra (-da)		-ta	TA
BA	-á, -ø		-te, -ti	YA
			-me	
			-mse	
		MA -ma		

Each of them predominantly builds the plurals of discrete sets of nouns, which also differ in their singular class assignments.

Robma: pl. NF : -ti ~-te

While most of the nouns of singular class RA (= *class 5) build their plurals with the NF **-ta** and take AGR of class **TA**, e.g.

sumba-rá / sumba-**tá** egg RA / **TA**
 dín-dá / dín-**tá** name
 dóo-rà / dóo-**tà** (Sirima) breast

A smaller but still sizable group builds their plurals with the NF variants **-te ~ -ti** and takes accordingly agreement of AGR class **YA**. The majority (15) of the cases in my data denote plurals of body parts, others are plurals of *wound, death, hoe, stone, rope, star, path, and hare*.

AGR Y(A)

SG		TN	PL	
AGR	NF		NF	AGR
YA	-é		-á	BA
WA	-ó~ -ú -		-zà~ -sà -à	ZA
RA	-to -ra (-da)		-ta	TA
BA	-á, -ø		-te, -ti -me	YA
			-mse	
		MA -ma		

dùù-ra / dùù-**ti** head RA / **YA**
 tǒ'ò-rá / tǒ'ò-**te** breast (Robma)
 tìim-rá / tìim-**tí** nose
 kwěě-rá / kwěě-**te** neck
 dunga-rà / dunga-**tè** stone

Robma: pl. NF : -ti ~-te, -mse

NF: **-te ~ -ti** also form plurals of a very small set of nouns of gender BA / **YA** e.g.

tàf-á / tètù-**té** bone

NF **-mse** (Sirima **-mje**) of AGR **YA** forms the plurals of the couple mass nouns of class MA which are attested with a "plural", by adding NF **-mse** to the full 'singular' form.

món.má / món.má-**msè** blood MA / **YA**

rota.ma / rota.ma-**mse** dream

(mbráà / mbráá-**msà** water) MA / ?

AGR Y(A)

SG		TN	PL	
AGR	NF		NF	AGR
YA	-é		-á	BA
WA	-ó~ -ú		-zà~ -sà	ZA
	-		-à	
	-to			
RA	-ra (-da)		-ta	TA
			-te, -ti	YA
BA	-á, -ø		-me	
			-mse	
		MA -ma		

-mse ~ mje occurs in addition with several plural nouns as an optional(?) or general plural suffix variant.

Robma: pl. NF : -me

The suffix **-me** of plural class **YA** is probably the remnant of a noun class *mV, cognate to Samba-Duru *mo, and Gur *mu, and thus does not belong to the category of NFs under discussion. **-me** is the 'regular' plural suffix in gender BA / **YA** which contains **almost all the trees**, plus several other items.

BA / YA

rowá / rowá-**mé** locust-bean tree
dól-á / dol-**mé** mahogany, Khaya s.

ar-á / ar-**mé** fire

AGR Y(A)

SG		TN	PL	
AGR	NF		NF	AGR
YA	-é		-á	BA
WA	-ó~ -ú -		-zà~ -sà -à	ZA
	-to			
RA	-ra (-da)		-ta	TA
			-te, -ti	YA
BA	-á, -ø		-me	
			-mse	
		MA -ma		

The presence of these semantic subsets in the AGR plural class YA may, however, be an indication of an inherited undefined semantic of class *i, and its function as a general pluraliser.

Conclusion

- Taking on their own these 'oddities' and 'anomalies' can be brushed away by 'chance resemblances' but the more 'oddities' 'anomalies' are shared by the same languages, the less likely is 'chance'.
- Captivating is, that the morphological sets of nouns which do not trigger an own agreement pattern, and also those NFs formally unrelated to the respective AGR morphemes seems to be found in one and the same wide-spread plural class reconstructed as *i (or class 4) for Proto-Gur (Miehe et al. 2012).
- As Manessy said about this class in Oti-Volta where he even reconstructed four class morphemes
- *“le contenu de *i- *yi- *ki- *ŋi auquel nous reconnâtrons une valeur pluralisante, sans plus de précision.” 1975: 100*

	'water'	'blood'	smoke	'flour'	'sleep(ing)'
Kulaal	ím (mè) / í-tè (kì)	hě-tè (kì)	héém / héén-té	fòm / fò-rè	lòòm
Beiya	máám / máám-tə	meeme / mem-te	rààm / rààm-tə	zum / zum-tə	niim / niim-tə
Kobom	meme / mem-de	mime / mim-de	ìyèèm (Vere)	zime / zim-de	nime / nim-ne

Tula plural NF **-ti** in AGR class **Y**, plural of the genders **W/Y** and **B/Y**

- **-i** yìb-ε / yìb-^ʔ chicken (**W/Y**)
 kùm / kum-**i** night
- **-ni** kúu / kuu-ní farm
 lb-ɔ / lb-nɛ house
- **-ti** tɔ́ / tɔɔ-**tí** knife
 kàda / kàda-**ti** dog
- kùtùùm / kùtùm-**tí** blood (**B/Y**)
- mīim / mīim-**ti** flour
- cààm / cààm-**ti** corn, grain
- dùùm / dùùm-**i** sleep
- wam / wam-**í** beans

The plural AGR class **Y** has three nominal suffixes:

-i; **-ni**, and **-ti**.

-i is the principal NF of AGR class **Y**, **-ni** is most likely the remainder of the merger of proto classes ***i** (class 4) and ***ni** (class 10), while **-ti** – as I assume – is a cognate to the NF of **class 4a**.

AGR **Y** forms the plurals of the gender **W/Y**, **K/Y**, and **B/Y**.

Gender **B/Y** contains liquids, masses and abstract nouns. Most of the 'plurals' are build with the NF **-ti**, and in a couple cases with **-i**, the regular suffix of class **Y**.

Tula also has the AGR class genders **D/T**, **K/T**, plus a single class **T** (containing abstracts and masses). In none of these is a plural form with a nominal suffix **-ti** attested.
