

Reconstructing the Proto-NW-Kainji languages of Nigeria: Adnominal marking

Rebecca Paterson
Princeton University & SIL

Comparative Niger-Congo Workshop, LLACAN-CNRS, Villejuif, France

22-23 May 2025

Abstract

The Kainji languages are the northwestern most of all East Benue-Congo languages. Their lexical, phonological and morphological diversity is reminiscent of the complexity across Benue-Congo, including the entire Bantu domain stretching into Southern Africa (see McGill 2009; McGill & Blench 2012; Harley 2012; Mort 2012; Paterson 2019; Blench 2018). However, Kainji languages are wholly contained within Nigeria and surrounded by languages of other stock. The currently available data show that Kainji displays great internal diversity; their lexical similarity is as low as 20% based on cognates from a 200 wordlist (McGill & Blench 2012). In this talk I present developing work on a historical-comparative reconstruction of the sound system and noun class affixes of Northwest Kainji (NWK), a low-level group within Kainji, based on published sources, unpublished manuscripts sources, and data from fieldwork conducted since 2005.

Despite poor knowledge and the unpublished state of most data, assertions have been made about how Kainji fits into our collective understanding of Benue-Congo, particularly regarding noun classification systems. De Wolf (1971) reconstructs Proto-Benue-Congo noun classes but only includes data from two Kainji languages; Hepburn-Gray (2020) reconstructs Proto-NigerCongo noun classes but only discusses Kainji data from two other Kainji languages. Making claims based on such limited amounts of data from a key subgroup within Benue-Congo hinders our understanding of Niger-Congo's internal structure (which is at present (a) still largely unknown and/or (b) groups are not supported by historical-comparative evidence).

Several researchers have approached Kainji languages from a comparative or historical-comparative perspective (e.g., Regnier 1992/2003; McGill 2009; McGill 2012; Bacon & Bird 2016; Bacon 2016). However, these preliminary results have not been systematically published, and they do not include data from all Kainji languages for which data now exists. The most comprehensive and ongoing effort to date is Blench's (2012-2020; updated 2025) unpublished manuscript (443 pages) which organizes lexical data from across all Kainji subgroups and includes many terms for flora and fauna in the region with data from distributed sources. Pozdniakov (2018) provides a reconstruction of Proto-Kainji numerals.

Abstract cont.

The NW Kainji languages, currently identified as əd-Gwamhyə [bga], əd-Wuri [bga], d-Mba [bga], and Tidama'un [dam, moribund], C'Lela [four varieties under the ISO 639-3, dri], Țt-Ma'in [seven varieties with internal diversity under the ISO 639-3, gel], Țs-Saare [uss], and Țt-Hun [uth], are unified by their characteristic use of consonant (only) noun class prefixes, featuring a transitional central vowel to ease pronunciation (Blench 2020). For example, as shown below, all extant NWK languages have a noun class prefix likely cognate with the Proto-Benue-Congo *li- (de Wolf 1971) and the Proto-Bantu agreement marker *ǀi (Meeussen 1967).

Code	Autonym	Class 5	Agreement	Example	Gloss
gel	Țt-Ma'in (Ror)	ȡr ^ə -	dɛ	ȡr ^ə -í:s	‘CM-eye’
dri	C'Lela (Dabai)	d ^ə -	dɔ	d-ìsɔ́	‘CM-eye’
uth	Țt-Hun (Rijau)	íɾ-	dɛ	íɾ ^ə -jíf	‘CM-eye’
uss	Țs-Saare (Dukku)	íɾ-	dɛ	íɾ ^ə -í:s	‘CM-eye’
bga	əd-Gwamhyə	əl-	?	əl-ií	‘CM-eye’

Where and what are the Kainji languages?

- **Koelle's** (1854) **Polyglotta Africana** contains the first known transcriptions of Kainji data – for Kamuku and Basa classified together, and Kambali (i.e., Kambari) classified as an isolate.
- **Greenberg** (1963: 8) classifies the Kainji languages within Benue-Congo on the basis of their geographical distribution as **Plateau 1a** – western – and **1b** – eastern – (McGill 2012; McGill & Blench 2012; Blench 2018: 61-62). However, there appears to be no linguistic basis for such a split (Blench in press; 2020a), despite the geographic separation between eastern and western languages.
- **Gerhardt** (1989) is the first to publish the label **Kainji**. He provides an overview of classification hypotheses from 1963-1989 and the various labels applied to “Kainji” languages across that time period. He proposes seven West Kainji groups and five East Kainji groups based on his own lexicostatistical study and two others (Shimizu 1975; Bennett & Sterk 1977).

Kainji Languages

Location and classification within East Benue-Congo

Watters (2018: 3,5); Gerhardt (1989)

- Most northwest of all East Benue-Congo languages.
- Number of distinct varieties from 59, perhaps up to 80.

NW Kainji

- Abstractions based mostly on comparison of [gel], [dri], [uss], and [uth].
- Very few words available for [bga] and [dam]. Data available for [bga] in ELAR will be incorporated summer 2025.
- Note: < j > is [j] the palatal approximant.
- Note: Numbering is specific to NWK and not aligned to any higher branch of Benue-Congo or Niger-Congo. Patterns of odd (singular) and even (plural) are maintained, and 1/2 is typically used for humans.

NW Kainji adnominal marking (left) vs. agreement system (right)

NW Kainji Adnominal Markers and Agreement Forms

- In this section, the (prefixing) adnominal marking and schematic agreement forms are shown in their separate systems for four of the five extant NW Kainji languages.
- Pairings of classes are depicted as described in the listed resource; numbering is my attempt at aligning and does not reflect original numbering of sources.
- These displays follow Güldemann & Fiedler (2019) separating the adnominal system from the agreement/gender system.

NW Kainji Adnominal Marking

- Citation forms of NW Kainji nouns bear class prefixes. In this presentation, these are labeled Noun Form I.
- This display also contains word formation processes that result in words within particular classes, particularly WA and JA used commonly for human singulars and Jɛ forms used commonly for animate (including human) plurals.
- Notice also the use of the –Nɛ suffix in the Jɛ for human plurals

How do speakers use all of these morphemes?

- All NW Kainji languages show four distinct word forms (herein labelled Noun forms I, II, III, and IV).
- Noun form III is dedicated to marking certain subjects.
- Noun Form IV is the bare noun root for which class is typically retrievable from some other element within the NP or wider context.
- The next three slides give an overview of the complexities of the [gel] system including the agreement forms on various agreement targets. Of note, is that no agreement marking is found on the [gel] verb.

Ut-Ma'in [gel] Agreement Targets

- [gel] agreement targets are of two types: those that take an agreement form that maintains its thematic vowel and those that do not maintain the thematic vowel.
- When no thematic vowel is present, either an adjacent vowel supports tones associated with a given construction or an epenthetic central vowel [ə] is supplied to meet syllable structure requirements and to support tones.

NWK Noun Form I [CL N]

- 1) *yá* *mē* *ǫm-hō* *ám* *sō* *ut-Hun* [uth]
give 1SG.OBJ CL8-water 1SG.SUBJ drink
'Give me water to drink.' (Bendor-Samuel et al. 1973: 36)

- 2) *dɔ* *rɔ* *dɔr* *m-mi* *us-Saare* [uss]
AG6 COP follow CL8-water
'(Utensils, plates, mats,...) they are following (flood) water' (Heath 2020: 192)

- 3) *ù-sò:-k* *(ǫ)m-hò:* *C'Lela* [dri]
3SG-drink-PFV1 CL8-water
'S/he drank water.' (Dettweiler 2015: 90)

NW Kainji Noun Form II

- In the following examples, Noun Form II is shown for [uth], [uss], and [dri].
- It takes the obligatory form [N CL] and occurs before modifiers such as Adjectives, Demonstratives, and Possessive Pronouns.
- In [gel], [uth], and [uss], the CL is suffixed to the N. In [dri], the CL is prefixed to the modifier.

NWK Noun Form II [N CL]

- 5) *ā yāāsāŕ wá h̄-ḡm pūs m̄* *ut-Hun [uth]*
one gave AG1 water-CL8 whiteAG8

‘He was given white water.’ (Bendor-Samuel et al. 1973: 144)

- 4) a. *mi-m̄ wà* b. *mi-m̄ wá* *us-Saare [uss]*
water-CL8 DEM.NEAR water-CL8 DEM.FAR

‘this water’

‘that water’ (Heath 2020: 192)

- 6) *h̄: m-rí ?èl ló* *C’Lela [dri]*
water AG8M-1SG.POSS COP there

‘It is my responsibility.’ Lit: ‘My water is there.’ (Dettweiler 2015:42)

NW Kainji Noun Form III

- In the following examples, NW Kainji Noun Form III is shown for [uth], [uss], and [dri].
- It takes the obligatory form [N-CL] for [uth] and [uss], where it must be the form used for an unmodified N in subject position.
- In the [gel] examples, shown above, the form is syllabically and tonally distinct from Form II; tonal information is not available for [uss], so it may be that Form II and III are not distinct in [uss].
- For [dri], it takes the obligatory form [N CL-V], where it must attach to the first element of the immediately following VP; no adverbials or other elements are known to intervene.

NWK Noun Form III [N CL]

- 7) *èrēgé ónē hō-ōm táágàtè ò-hūr é... ɥt-Hun [uth]*
if water-CL8 has.finished CL3-home DEP

‘If water has finished at home/If there is a lack of water ...’(Bendor-Samuel et al. 1973: 43)

- 8) *be mi-m es:ε o-hur = à... ɥs-Saare [uss]*
as water-CL8 hold CL3-house = DEP

‘As water covered the house, ...’ (Heath 2020: 192)

- 9) *hò: m-tá:-kà C’Lela [dri]*
water AG8M-finish-PFV1

‘The water is finished.’ (Dettweiler 2015: 90)

NW Kainji Noun Forms I-IV

- Synchronically, NW Kainji nouns maintain a fairly consistent and identifiable root shape (with some exceptions for C'Lela [dri] plurals not discussed herein), whereas the obligatory class marking varies in its morphological shape, including tonal quality, and in its syntactic location with regard to the root.
- This is discussed in detail for [gel] in Paterson (forthcoming).
- The clitic-like nature of NW Kainji adnominal marking is discussed in Güldemann & Fiedler (forthcoming), with evidence from [gel].
- Each construction is used to accomplish particular morphosyntactic ends.
- For Proto-NWK, adnominal class prefixes and adnominal class suffixes can be reconstructed.
- Perhaps better, we can reconstruct the “constructions” within which Proto-NW-Kainji adnominal marking occurs in diverse, and yet, obligatory positions, aligned with their specific morphosyntactic purposes.
